ABSTRACT

Phytochemicals are chemical compounds often referred to as secondary metabolites. Thirty nine bioactive phytochemical compounds were identified in the methanolic extract of Cinnamon bark. The identification of phytochemical compounds is based on the peak area, retention time molecular weight and molecular formula. GC-MS analysis of *Cinnamomum zeylanicum* revealed the existence of the 6 -Oxa-bicyclo[3.1.0]hexan-3-one, Benzaldehyde, Cyclohexene,4-isopropenyl-1-methoxymethoxymethyl, Benzoic acid- methyl ester, Benzaldehyde dimethyl acetal, Benzene propanal, Benzylidenemalonaldehyde, 3-Phenylpropanol, Cinnamaldehyde, (E), 2-Propen- 1- ol,3-phenyl, 9-Methoxybicyclo[6.1.0]nona – 2,4,6- triene , 1,3-Bis(cinnamoyloxymethyl) adamantine, Alfa.- Copae, Naphthalene , 1,2,3,5,6,7,8,8a-octahydro-1,8a-dimethyl-7-(1-methyl), Cis – 2-Methoxycinnamic acid, Bicyclo[3.1.1]hept-2-ene,2,6- dimethyl-6-(4-methyl-3-pentenyl), Trans-2-Hydroxycinnamic acid , methyl ester, y-Murolene, β -Guaiene, Cadala-1(10),3,8-triene, Isolongifolene,4,5,9,10-dehydro, Cubenol, Tau-Murolol, Δ -Cadinol , Spiro[tricyclo[4.4.0.0(5.9)] decane-10.2oxiran], 1-methyl-4-isopropyl, 6-Isopropenyl-4,8q-dimethyl-1,2,3,5,6,7,8,8a-octahydronaphthalen, Ethyl9,9-difomylnona-2,4,6,8-tetraenoate, Trans-13-Octadecenoic acid, Tributyl acetyl citrate, 9,12,15-Octadecatrienoic acid ,2,3-dihydroxypropyl ester, 9-Octadecenamide, 17.alfa.-21B-28,30-Bisnorhopane, 17.alfa.-21B-28,30-Bisnorhopane, Androstan-3-one,cyclic 1,2-ethanediyl mercaptone , (5á), (4H)4a,5,6,7,8,8a-Hexahydrobenzopyran-5-one-3-carboxamide,2, 4H-Cyclopropa[5',6']benz [1',2',7,8]azuleno[5,6]oxiren-4-one,8,8a, (22S)-21-Acetoxy-6á,11B-dihydroxy-16á,17á-propylmethylenediox, (+)- α -Tocopherol,O-methyl and Stigmasterol. *Cinnamomum zeylanicum* contain chemical constitutions which may be useful for various herbal formulation as anti-inflammatory, analgesic, antipyretic, cardiac tonic and antiasthmatic. *Cinnamomum zeylanicum* was highly active against *Aspergillus flavus* (6.16 ± 0.42). Methanolic extract of bioactive compounds of *Cinnamomum zeylanicum* was assayed for in vitro antibacterial activity against *Pseudomonas aerogenosa*, *Escherichia coli*, *Proteus mirabilis*, *Staphylococcus aureus* and *Klebsiella pneumonia* by using the diffusion method in agar. The zone of inhibition were compared with different standard antibiotics. The diameters of inhibition zones ranged from 6.12 ± 0.52 to 0.39 ± 0.17 mm for all treatments.

Keywords: Antifungal, Antibacterial, *Cinnamomum zeylanicum*, Gas chromatography-mass spectrometry, Fourier-transform infrared spectroscopy.

INTRODUCTION

Cinnamomum zeylanicum Blume (Lauraceae), is called true cinnamon. Cinnamon is an evergreen of tropical area reaching about nine meters high and covered with a smooth, pale bark¹⁻³. It is considered to be the native of Sri Lanka and Malabar Coast of India^{4,5}. Cinnamon mainly contains essential oils and important compounds like cinnamaldehyde, eugenol, cinnamic acid and cinnamate. It has traditionally been used to treat toothache, fight bad breath and treatment common cold⁶⁻⁹. The bark of tree consists of volatile oil, possesses many medicinal properties like antibacterial, anti-oxidant, anti-ulcer, antidiabetic¹⁰⁻¹² and antifungal (Bruneton et al., 1998). Cinnamaldehyde is the most prevalent with concentration of 6,000 –30,000 ppm^{13,14}. The aims of this study were analysis of chemical compounds of *Cinnamomum Zeylanicum* (Cinnamon bark) and evaluation of antifungal and antibacterial activity.

MATERIALS AND METHODS

Collection and preparation of plant material

Cinnamomum zeylanicum (Cinnamon bark) were purchased from local market in Hilla city, middle of Iraq. After thorough cleaning and removal of foreign materials, the Cinnamon bark was stored in airtight container to avoid the effect of humidity and then stored at room temperature until further use¹⁵⁻¹⁷.

Preparation of sample

About eighteen grams of methanolic extract of *Cinnamomum zeylanicum* powdered were soaked in thirty three ml methanol for ten hours in a rotatory shaker. Whatman No.1 filter paper was used to separate the extract of plant¹⁸⁻²². The filtrates were used for further phytochemical analysis. It was again filtered through sodium sulphate in order to remove the traces of moisture.

Gas chromatography – mass spectrum analysis

The GC-MS analysis of the plant extract was made in a (QP 2010 Plus SHIMADZU) instrument under computer control at 70 eV. About 1µL of the methanol extract was injected into the GC-MS using a micro syringe and the scanning was done

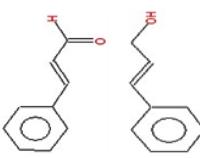

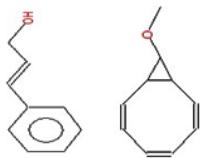

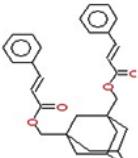

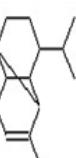

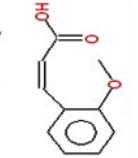

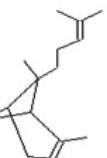

for 45 minutes. As the compounds were separated, they eluted from the column and entered a detector which was capable of creating an electronic signal whenever a compound was detected²³. The greater the concentration in the sample, bigger was the signal obtained which was then processed by a computer. The time from when the injection was made (Initial time) to when elution occurred referred to as the Retention time (RT)²⁴. While the instrument was run, the computer generated a graph from the signal called Chromatogram. Each of the peaks in the chromatogram represented the signal created when a compound eluted from the Gas chromatography column into the detector. The X-axis showed the RT and the Y-axis measured the intensity of the signal to quantify the component in the sample injected. As individual compounds eluted from the Gas chromatographic column, they entered the electron ionization (mass spectroscopy) detector, where they were bombarded with a stream of electrons causing them to break apart into fragments. The fragments obtained were actually charged ions with a certain mass²⁵⁻²⁷. The M/Z (mass/charge) ratio obtained was calibrated from the graph obtained, which was called as the Mass spectrum graph which is the fingerprint of a molecule. Before analyzing the extract using Gas Chromatography and Mass Spectroscopy, the temperature of the oven, the flow rate of the gas used and the electron gun were programmed initially. The temperature of the oven was maintained at 100°C. Helium gas was used as a carrier as well as an eluent. The flow rate of helium was set to 1ml per minute. The electron gun of mass detector liberated electrons having energy of about 70eV. The column employed here for the separation of components was Elite 1 (100% dimethyl poly siloxane). The identity of the components in the extracts was assigned by the comparison of their retention indices and mass spectra fragmentation patterns with those stored on the computer library and also with published literatures. Compounds were identified by comparing their spectra to those of the Wiley and NIST/EPA/NIH mass spectral libraries²⁸.

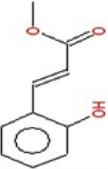

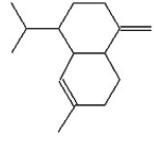

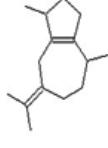

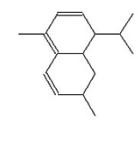

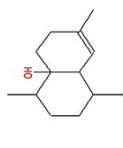

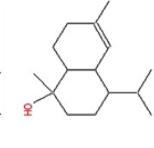

Determination of antibacterial activity of crude bioactive compounds of *Cinnamomum zeylanicum*

The test pathogens (*E. coli*, *Pseudomonas aeruginosa*, *Klebsiella pneumonia* and *Staphylococcus aureus*) were swabbed in Muller

Table 1: Phytochemical compounds identified in methanolic extract of *Cinnamomum zeylanicum*

S No.	Phytochemical compound	RT (min)	Formula	Molecular Weight	Exact Mass	Chemical structure	MS Fragment- ions	Pharmacological actions
1	6-Oxa-bicyclo[3.1.0]hexan-3-one	3.419	$C_5H_{10}O_2$	98	98.0368		55, 69, 98	New chemical compound
2	Benzaldehyde	3.67	C_6H_6O	106	106.042		51, 63, 77, 86, 106	Anti-convulsant activity; anti-microbial, anti-diabetic, and antiobesity
3	Cyclohexene, 4-isopropenyl-1-methoxymethoxymethyl-	3.859	$C_{12}H_{20}O_2$	196	196.146		53, 79, 91, 119, 164, 196	New chemical compound
4	Benzoic acid methyl ester	5.095	$C_8H_{10}O_2$	136	136.052		51, 59, 65, 77, 92, 105, 118, 136	New chemical compound
5	Benzaldehyde dimethyl acetal	5.284	$C_9H_{12}O_2$	152	152.084		51, 59, 65, 77, 91, 105, 121, 136, 151	Anti-cancer activity
6	Benzene propanal	5.942	$C_6H_{10}O$	134	134.073		51, 65, 78, 91, 105, 115, 134	Antimutagenic and anti-malarial
7	Benzylidenemalonaldehyde	6.715	$C_{10}H_{12}O_2$	160	160.052		51, 63, 77, 91, 103, 115, 131, 159	Anti-inflammatory
8	3-Phenylpropanol	7.121	$C_9H_{12}O$	136	136.089		51, 77, 91, 105, 117, 136	Antineoplastic and anti-inflammatory

9	Cinnamaldehyde, (E)-	7.619	C_9H_8O	132	132.058		51,63,74,77,91,103, 115,131	Antityrosinase activity; anti-inflammatory and antiemetic
10	2-Propen-1-ol, 3-phenyl-	8.082	$C_9H_{10}O$	134	134.073		51,63,78,92,105, 115,134	New chemical compound
11	9-Methoxybicyclo [6.1.0]nona-2, 4,6- triene	8.219	$C_{10}H_{12}O$	148	148.089		51,63,77,91,105, 115,133,148	New chemical compound
12	1,3-Bis(cinnamoy- loxy)methyl)adamantane	8.414	$C_{30}H_{32}O_4$	456	456.23		51,77,91,103,119,131, 147,160,204,250,280	New chemical compound
13	Alfa,- Copaeene	8.797	$C_{12}H_{24}$	204	204.188		55,69,77,91,105,119, 133,147,161,175,189,204	New chemical compound
14	Naphthalene , 1,2,3, 5,6,7,8,8a-octahydro-1, 8a-dimethyl-7-(1-methyl)	8.935	$C_{15}H_{24}$	204	204.188		55,67,79,107,119,133, 147,175,189,204	New chemical compound

RESULTS AND DISCUSSION

Analysis of phytochemical compounds of methanolic extract of *Cinnamomum zeylanicum* was carried out by gas chromatography-mass

spectroscopy (Table 1). The GC-MS chromatogram of the thirty nine peaks of the compounds detected are shown in Figure 1. Chromatogram GC-MS analysis of the methanolic extract of *Cinnamomum zeylanicum* showed the presence of thirty nine

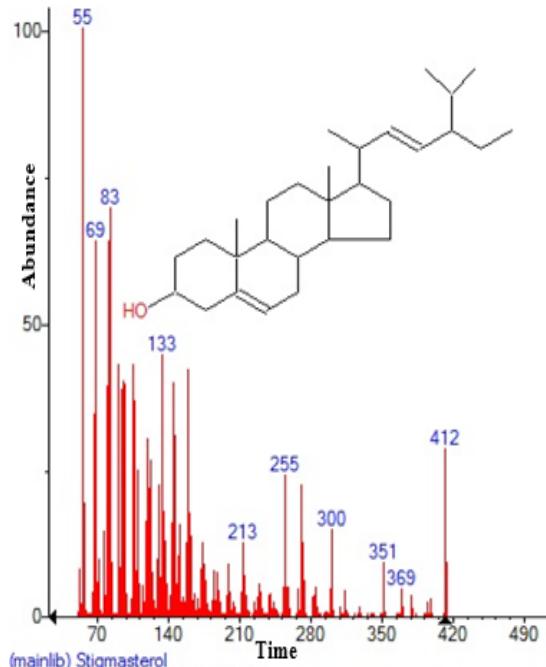

Fig. 40: Structure of Stigmasterol present in the methanolic extract of *C. zeylanicum* using GC-MS analysis

and Stigmasterol Figure 4-40. Five clinical pathogens were selected for antibacterial activity namely, (*Klebsiella pneumoniae*, *Pseudomonas aeruginosa*, *E.coli*, *Staphylococcus aeureus* and *Proteus mirabilis*. Maximum zone formation was against *klebsiella pneumoniae*, Table 2. Methanolic extraction of plant showed notable antifungal activities against *Aspergillus niger*, *Asp. terreus*, *Asp. flavus*, and *Asp. fumigatus* Table 3. *Cinnamomum zeylanicum* was very highly active against *Aspergillus flavus* (6.16 ± 0.42). *Aspergillus* was found to be sensitive to all test medicinal plants and mostly comparable to the standard reference antifungal drug amphotericin B and fluconazole to some extent.

CONCLUSION

From the results obtained in this study, it could be concluded that *Cinnamomum zeylanicum* acts possesses remarkable antimicrobial activity, which is mainly due to (E)-cinnamaldehyde. According to these findings, it could be said that the methanolic extract of *Cinnamomum zeylanicum* acts as antifungal and antibacterial agents.

ACKNOWLEDGEMENTS

Special thanks to Prof. Abdul-Kareem, Babylon University, Faculty of science for women, for his special care.
